Boston Society of Architects

O'Boyle, Cowell, Blalock & Associates, Inc. (OCBA) was retained in 1994 by Shepley, Bulfinch, Richardson & Abbott (SBRA) architects for the new multi-functional medical campus to provide landscape site design services. Design and construction documents were completed by OCBA in 1997 for multiple phases of construction in collaboration with SBRA and under the direction of Bronson Methodist Hospital.

OCBA was responsible for design and coordination of vehicular circulation, parking, walks, plazas, grading, storm water management, landscaping, and irrigation. In addition, OCBA developed a final design and worked with the construction manager to implement an atrium garden space inside the building. OCBA visualized this peaceful space as an extension of the exterior garden and worked with an interior plantscaping firm to reflect the plant character of those found in Michigan.

OCBA has continued to work with Bronson Methodist Hospital to redevelop and improve adjacent parcels and the old hospital campus so that the quality and character of all of Bronson's facilities are consistent.
