Michigan Municipal League

O'Boyle, Cowell, Blalock & Associates, Inc. (OCBA) was commissioned by the City of Fremont's Downtown Development Authority in 1986 to prepare a master plan for improvements to its 1 1/2 mile long Main Street (M-82) commercial corridor. The study identified three distinct districts along the corridor and made recommendations for improvements that were tailored to the characteristics of each.

OCBA has prepared construction documents and administered the construction of several projects recommended by the study including lighting, landscaping and signage improvements along the west end of the corridor, and streetscape and park improvements in the downtown district.

Consultants to OCBA included Slocum Associates, Inc., Architects, Westshore Engineering, Kingscott Associates, Inc. and Engineering Plus, Inc.
