

Washington Avenue Improvements

City of Lansing, Michigan

OCBA worked with the City of Lansing to prepare design studies that would illustrate a proposal to remove the Washington Avenue Pedestrian Mall and install street, curb and gutter and parking. New streetscape amenities in the six-block study area were also included in the proposal.

OCBA was subsequently retained by the City to complete final design studies, prepare construction documents, and assist with the administration of the construction contract for the improvements. The project was completed in the fall of 2001.
